Facility Identification Implementation Fact Sheet

Data Standard: **Facility Identification**

Description: The group of core data elements that properly identify the location, the affiliated organization, industrial business activity, and environmental interests of a facility site.

Requirements:
1. Information systems must identify data elements in their system that are part of the facility identification standard, and modify metadata (format, representation), if necessary, to conform with standard.
2. Programs must map their elements to elements in the Facility Registry System.
3. Collection tools may need to be modified to conform to the standard.

Implementation Date:
REI National Systems: September 30, 2003
All other systems: As part of normal reengineering schedule
